Now, Isosceles $\triangle OLD$ can be plotted using vertices LD , OL and DO .

Plot of the Isosceles $\triangle OLD$ is required.

Fig. 2.1: Isosceles triangle $\triangle OLD$

1 QUESTION No.2.16

Construct an isosceles triangle in which the lengths of the equal sides is 6.5 and the angle between them is 110° .

2 SOLUTION

The vertices are:

$$\mathbf{L} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}, \mathbf{D} = \begin{pmatrix} ld \\ 0 \end{pmatrix}, \mathbf{O} = \begin{pmatrix} p1 \\ q1 \end{pmatrix} \quad (2.0.1)$$

Now, Lines od , ol and ld Can be plotted.

$$\mathbf{OD} = 2 * a * \cos(35) \quad (2.0.2)$$

$$(here, a = ol) \quad (2.0.3)$$

$$\mathbf{OD} = 2 * 6.5 * \cos(35) = 10.6 \quad (2.0.4)$$

$$\text{Coordinates of } O(p1, q1) \quad (2.0.5)$$

$$\mathbf{p1} = (ld^2 + ol^2 - od^2) / (2 * ld) \quad (2.0.6)$$

$$\mathbf{p1} = ((6.5)^2 + (6.5)^2 - (10.6)^2) / (2 * 6.5) \quad (2.0.7)$$

$$\mathbf{p1} = (42.25 + 42.25 - 112.36) / 13 = -2.14 \quad (2.0.8)$$

$$\mathbf{q1} = \sqrt{6.5^2 - p1^2} \quad (2.0.9)$$

$$\mathbf{q1} = \sqrt{6.5^2 - (-2.14)^2} = 6.13 \quad (2.0.10)$$

$$\mathbf{L} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}, \mathbf{D} = \begin{pmatrix} 6.5 \\ 0 \end{pmatrix}, \mathbf{O} = \begin{pmatrix} -2.14 \\ 6.13 \end{pmatrix} \quad (2.0.11)$$
